# Enterprise Chatbots: Beyond Telling the Weather

It is inevitable that the number of humans using natural language to interact with machines will explode over the next few years.

This will change the way we live,  
the way we work  
and the way machines work.

# SAP Leonardo Conversational AI Landscape

# SAP's Vision: Journey towards Enterprise AI

## Basic Chatbots

- Built by developers **using pre-defined rules**
- **Terminal-like** commands
- Basic task fulfillment, e.g.:
  - Get status
  - Approve workflow
  - Yes/no flows
- Isolated applications, usually single channel

## Digital Assistants

- Trained using **machine learning and data**, not via code
- **Robust voice & text understanding**, of more than they were taught
- **Contextual, personalized** actions, memory
- **Aggregate bots** cohesively, expose them via any channel
  - Messaging platforms [e.g. Slack]
  - Smart Speakers [e.g. Echo]
  - Phones [e.g. Siri]

## Enterprise AI

- **Systems learn how users work**, users don't have to learn how systems work
- Comprehensive understanding of **un/structured data**
- **Autonomous discovery & optimization** of processes
- **Act autonomously & proactively**, users focus on high-value work

**We're here today**

# Challenges in the enterprise

UX

Loaded with options, highly customizable, hard to grasp design

Domain Knowledge

More complicated process flows, Taxonomies, Multi-Language Support

Security/Privacy

High Priority, Authorization and Authentication

Technology

Computational Linguistic, Patterns, ML/DL, Production Data, Licenses

Integration

Deployment, APIs, Channels, Customization, 3<sup>rd</sup> party services [voice]

## Problems we focus on

UX

Loaded with options, highly customizable, hard to grasp design

Domain Knowledge

More complicated process flows, Taxonomies, Multi-Language Support

Security/Privacy

High Priority, Authorization and Authentication

Technology

Computational Linguistic, Patterns, ML/DL, Production Data, Licenses

Integration

Deployment, APIs, Channels, Customization, 3<sup>rd</sup> party services (voice)

# Building a Chatbot

## Data

Identify the right data which is needed for your use case

## Word Representation

Augment bot vocabulary using word vectors

## Features

Feature Engineering is the **key**. [Ex: POS Tags, NER, Reference Resolution]

## Algorithms

Use models which work well for text data – CNN, LSTM, Seq to Seq Models

*Very little code in an AI solution is ML Code*

# Data

## Domain Documents

Documents related to the use case which are well structured and have information about the domain

## Domain Vocabulary

Terminologies which are commonly used in the domain. This can enhance the vocabulary of the model

## Crowdsourced Data

Data which is gathered using crowdsourcing platforms like Amazon Mechanical turk, Crowdfunder, etc.

# Computational Linguistics

## Segmentation

Part of Speech Tagging, stemming, WSD

Dependency parsing

Entity Extraction

Break phrases into meaningful parts

*“change insurance”*

*“I see that my check shows me 76 hours,  
but I actually worked 80. How can we resolve  
this?”*

command style, multiple facts, references

# Computational Linguistics

Segmentation

**Part of Speech Tagging, stemming, WSD**

Dependency parsing

Entity Extraction

“apple”

“show room”

“How to change name?”

context, meaning

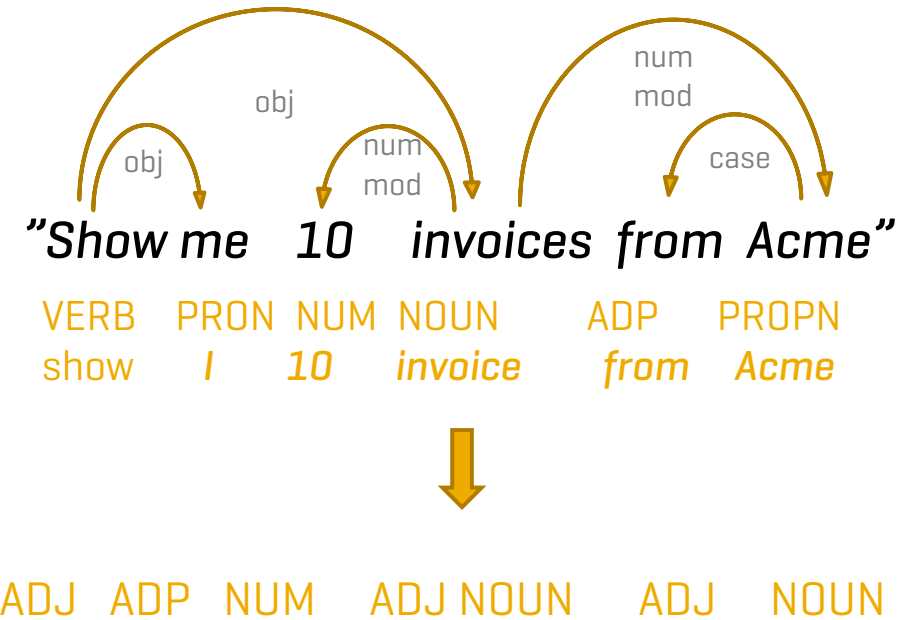

# Computational Linguistics

Segmentation

Part of Speech Tagging, stemming, WSD

## Dependency parsing

Entity Extraction

leverage, complexity

# Computational Linguistics

Segmentation

Part of Speech Tagging, stemming, WSD

Dependency parsing

## Entity Extraction

*All partly-paid POs in New York for Acme from March*

status  
attribute

purchase  
orders

US city

customer |  
vendor

date [month]

synonyms, standard entities, custom entities

# Machine Learning & NLP

## Word Vector Representations

GLOVE

Word2Vec

Bag of words

## Algorithms

TF/IDF

CNN

RNN

LSTM

## Training & Evaluation

CPU/GPU

Metrics : Precision & Recall

Hyper-parameter Tuning

## Algorithm Selection

Multi-Language Support

Partial Training Support

Maintainability

# Questions?

# Thank you!
